

Occupational Therapy (OT) promotes functional independence for children, teens, and adults who are dealing with the effects of disease, illness, injury, disability, or developmental delays. Occupational therapists are experts in assessments and interventions of the whole person which includes cognitive, affective, physical and spiritual whereby the person is “embedded within the environment to indicate that each individual lives within a unique environmental context” (Townsend & Polatajko, 2007, p23) and occupation (everyday activities) connects the person and environment. The OT can also determine if the intervention should be either compensatory or rehabilitative which has an underlying assumption that skills develop in a chronological order and that foundational skills are needed for future skills to develop (Pratt and Allen, 1989).

OT's can offer cognitive testing to look at attention, memory, executive functioning (planning, organization, impulsivity) as well as sensory issues that all can affect functioning in daily activities including school and work performance. Treatment involves teaching strategies and giving recommendations on accommodations in the classroom, work, and/or home but more importantly occupational therapy can provide rehabilitation to help the brain get stronger so that the person can improve attention, memory, sensory, and executive functioning skills.

The price list below indicates treatment costs

Initial Assessment	First visit	\$150
	Assessments (include standardized testing) - 1hr*	\$120
	Neurofeedback baseline qEEG	\$350
Brain function testing	Brain FX assessment (10 yrs or older)	\$425 - \$600
	Report	\$120 - \$200
Follow-up sessions		1hr* - \$120 45min* - \$90 30min* - \$70 15min - \$40 (Usually phone)
	Sensory Intervention session	\$135
	Neurofeedback training	\$135 per session (first 10 sessions) \$120 session 11+
Summary Report Full Written Report		\$250 - \$300
		\$500 - \$900

A session that is 90 mins long would be 1hr rate plus the 30min rate = \$190

**Please note that this time includes therapist time for writing a progress note which means that face to face is 5-10 minutes less. Standardized testing requires more paperwork to tabulate results.*

Usually visits are at one of clinic locations. If a home visit is required or requested - travel time is billed at travel time and km.

An OT evaluation can last up to 4- 6 hours (over multiple visits). Additional time is required for a report to be written. At this point, a discussion of findings is done with the parents. Recommendations and a home

program are given. Extra therapy time may be warranted and will be charged accordingly based on the price list.

Lisa's Holistic Rehab offers cutting edge therapies that may have an additional fee to hourly rate. Examples would include:

- Rental of a listening system (if available) \$150 - plus tax per month for about 6-9 months and \$50-per month for online music access.
- Sensory integration therapy in multisensory room - \$135 per session
